Missouri and Big Sioux Rivers Update #9

Forecasts from the National Weather Service indicate that both rivers will crest today and then, very slowly, recede over the next several days. We remain vigilant to the effects of the current river pressures on the temporary protection structures in Dakota Dunes and a breach remains a threat. Use your best judgement on relocation. The residents that have relocated, use your best judgement on returning or waiting until the river levels recede further. We will keep you advised.

- The sanitary sewer system will only be shut down if the river breaches the protection in residential areas to preserve the infrastructure.
- We do not believe water, gas and electric will be impacted at this time.
- We recommend floor drains remain in place.
- There is rain in the forecast the next three days, please leave your irrigation systems off.
- Please check on your elderly neighbors as they may not get notices electronically.
