Missouri and Big Sioux Rivers' Update #11

Based on the current forecast, we will be fighting water on our protection until at least Tuesday morning, if no additional heavy rains occur in the Missouri River basin. River levels are still extremely high and maintenance on the preventive measures are still on-going. It is important to continue to prepare as we have discussed in previous alerts with relocation still a choice you will need to make.

- The sanitary sewer system will only be shut down if the river breaches the protection in residential areas to preserve the infrastructure.
- We do not believe water, gas and electric will be impacted at this time.
- We recommend floor drains remain in place.
- There is rain in the forecast the next three days, please leave your irrigation systems off.
- Please check on your elderly neighbors as they may not get notices electronically.
